

uLink

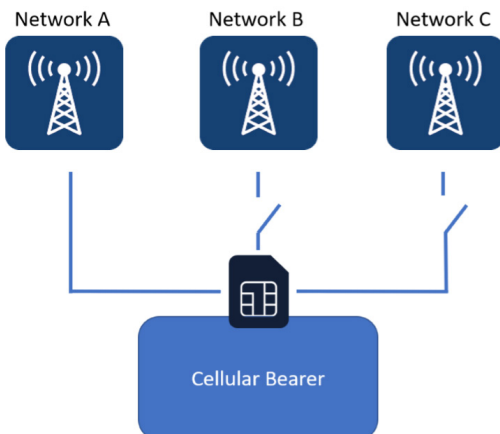

eSIM Provisioning and Data Management for 2G/3G/4G and LoRaWAN - Global coverage, multiple networks, intelligent billing, and IoT tools.

Features

- Connectivity management; control your SIMs from our online portal
- Data analytics and reporting; understand more about your data, control your budgets
- Multiple networks available to a single SIM for improved quality of service
- True, real time billing; prevent unwanted usage immediately and avoid unnecessary charges
- Configure your own networks and control how you route your data
- Geolocation services without the need for additional devices
- APN security, secure routing, and VPN capabilities

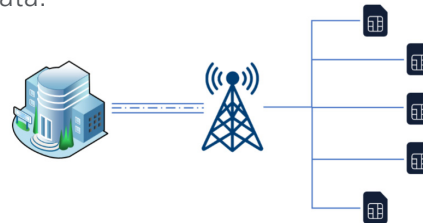

Diversity and Redundancy

Provide redundancy, diversity, and improve quality of service with uLink technology. Connect to any available network within the network list and when the connection is lost, the SIM will automatically seek a new network. No disruptions and reduced downtime, keeping you and your business operational.

Private and Flexible Networks

Manage and access your devices without third party apps with VPN capability on the cellular level to encrypt and secure your data. Fixed IP services are available at a set rate per year, with no burden on your data.

uLink Portal - Control, Analytics, and Reporting

uLink's online portal allows you to monitor your eSIM status, check your data usage in real-time, and more:

- Create your own monthly usage budget, including usage warnings and limits
- Create your own cost centers for each deployment to simplify your administration
- Pick the best performing network through the diagnostic tools
- Monitor location by Cell ID, IMEI, and more
- Access and coverage configuration - pick zones you want access to, include or exclude countries in each zone, suspend and resume eSIM's in real time.
- Cost management - see your costs in real-time and take action without worrying about additional charges. All the tools you need to manage your fleet are available.
